-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

The Applicant's election of claims 1-4 with traverse is noted. However, the Examiner disagrees that the various species are closely related enough to allow the Examiner to search all claims 1-49 instead of the elected claims 1-4. The election of species requirement is final.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Hall (US Patent 6,253,906).

Hall teaches a sequential release control for a zoned conveyor system which is structurally similar to the Applicant's claimed processing system. More specifically, the apparatus of Hall includes first and second loading stations, a conveyor traversing serially through said first and second loading stations. An accumulator in series between said first and second loading stations is provided. The loading stations include an inlet receiving said conveyor and an outlet delivering said conveyor. Each of the loading stations, conveyor and accumulator are able to have differential velocities. Regarding claim 4, the efficiency of the loading is widely considered to be more than a conventional system.

Conclusion

Summary: Claims 1-4 are rejected.
